

Bloomberg Law Dashboard Legal

NOW AVAILABLE

AI agents that keep work moving

Scattered information makes it harder to get up to speed and see what needs your attention. AI agents in Dashboard Legal organize that context and recommend actions for your review, so you can focus on decisions that require your legal judgment.

You review and approve recommendations before any action is taken.

Mia turns meeting notes into a proposed action plan with tasks, owners, and next steps.

Casey gets you up to speed faster, providing a clear status summary of recent activity, blockers, and unresolved items.

Sam flags deadline risks and recommends how your team should respond.

Available for eligible Dashboard Legal users.

CONNECTED INTELLIGENCE

Bring research and matter context together

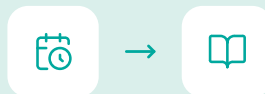

Bloomberg Law brings trusted research into Dashboard Legal, while Dashboard Legal brings relevant matter context into Bloomberg Law. Together, they help you apply key findings and turn them into tracked follow-ups.

Your research, matter context, and next steps stay connected.

In Dashboard Legal

BLAW AI brings Bloomberg Law research and answers into the matter, where you can link key findings to tasks, owners, and next steps.

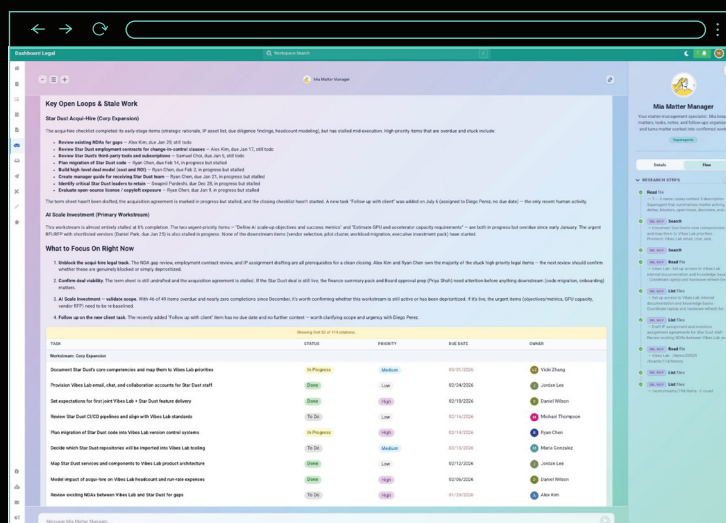

In Bloomberg Law

Dash, Dashboard Legal's AI Assistant, brings the matter's history and current status into your research, then helps turn key findings into assigned, tracked work in Dashboard Legal.

Built to work under your direction

- **Grounded in trusted information:** Agents draw from your matter context and Bloomberg Law content – not the open internet.
- **Controlled by your team:** Nothing changes without your review and approval.
- **Governed by existing access controls:** Your current permissions continue to apply.

Focus on the work that requires expertise – while AI agents handle more of the routine coordination behind legal matters.
