

# Enterprise Dockets Solution

## Empower Your Enterprise Solutions with Bloomberg Law Dockets

Bloomberg Law offers market-leading coverage of over 200 million U.S. dockets with unlimited searching and alerting by keyword and template fields. Our dockets database is designed to help you easily find cases and filings, gain valuable market intelligence on clients or industries, and identify business opportunities. The advanced docket search provided on our web-based platform may be the solution you're seeking.

In addition to its web platform, Bloomberg Law offers data-delivery options to integrate our dockets data into clients' internal applications.

## How Can Bloomberg Law Dockets Integrate with Your Enterprise?

### Alerts Integration

- Enterprise Dockets Search Alerts provides docket alerts in a JSON format delivered to a secure FTP site in regular intervals
- Clients set up alerts on Bloomberg Law with their own parameters and select delivery "by Feed"
- Clients can use their own internal applications to process the files

### Search Integration

- Docket Search API is a RESTful API which allows programmatic searching across various fields in our dockets and returns results in JSON format
- Clients can use their own app or script to query the API and results are returned with specific data fields

## Which solution is right for your firm?

Our clients use Bloomberg Law's advanced docket search as both a searching tool and a resource for aggregating data across multiple courts. The following table outlines different use cases and identifies whether the web platform or a data solution is the best fit for your organization.

Have another use case? We want to hear from you! For information on the technical requirements and the fields available with Bloomberg Law Dockets Integration, please contact James Choi, [jchoi@bloombergindustry.com](mailto:jchoi@bloombergindustry.com).

	Bloomberg Law	Dockets Integration
<b>Business Development</b>	<ul style="list-style-type: none"> <li>• Setting alerts for short list of clients or prospects (less than 100)</li> <li>• Setting alerts for a single court, case type, or NOS</li> <li>• Downloading lists of results</li> </ul>	<ul style="list-style-type: none"> <li>• Scaling up to alert on client and prospect lists of more than 100</li> <li>• Centralizing creation of and administration for all alerts for the firm</li> <li>• You have capability to process JSON files and to build own API queries with custom scripts or programs</li> </ul>
<b>Analytics</b>	<ul style="list-style-type: none"> <li>• "Out of the box" analytics by company, firm, or judge for Federal District Court cases</li> <li>• Provides quick links to news, company profiles, dockets</li> </ul>	<ul style="list-style-type: none"> <li>• Customized analytics (comparing internal or third-party data sets)</li> <li>• Building custom dashboards</li> <li>• Storing dockets data in an internal database for analysis by other software</li> </ul>
<b>Individual Research</b>	<ul style="list-style-type: none"> <li>• Searching filings/ underlying text of pleadings</li> <li>• Tracking additional filings</li> </ul>	Individual research use cases are best served by the web platform, not the API
