

Prepare your firm for European Taxonomy regulation.

The EU Taxonomy is a science-based body of work that forms the cornerstone of the European Green Deal. This framework is designed to direct private capital toward long-term, environmentally sustainable activities and prevent false claims about the environmental nature of an investment product.

Financial market participants worldwide will need to comply with the EU Taxonomy disclosure and reporting requirements from January 2022. Bloomberg's data and tools can support your firm on the path to compliance with a solution that adheres to the five-step process outlined in the **Taxonomy Report**.

1. Percentage of an investment portfolio eligible for Taxonomy assessment
2. Assess significant contribution to climate change mitigation and/or adaptation
3. Assess Do No Significant Harm requirements regarding six environmental objectives
4. Assess compliance with Minimum Social Safeguards
5. Determine alignment

Quickly assess Taxonomy eligibility

The Bloomberg Terminal's Watchlist Analytics function, WATC EUTAX <GO>, enables you to calculate what percentage of revenue of your underlying assets sits within Taxonomy-eligible activities, representing step one of the assessment.

WATC EUTAX <GO> See what percentage of your portfolio revenue comes from activities covered by the Taxonomy.

Meet current and future Taxonomy needs

Bloomberg's EU Taxonomy solution roadmap includes future product enhancements that will be introduced in two phases to support your firm's ongoing compliance needs.

Phase I – Green debt alignment

To help your firm identify green bonds that are being used to foster green activity, Bloomberg will assess asset-level use of proceeds aligned with the EU Taxonomy for qualifying securities under the Green Bond Standards.

Phase II – Taxonomy alignment

For companies that report their Taxonomy alignment, Bloomberg will collect and display this information to enable investment managers to see the percentage of their portfolio aligned with the Taxonomy. For international companies, or those not yet reporting their taxonomy alignment, Bloomberg will map 'as reported' data to the screening test requirements in order to provide a 'potentially aligned' forecast for eligible companies.
