

# FX STP Link

Simplify your FX post-trade workflows with Bloomberg Global Financial Network and an enterprise-grade STP solution

Evolving regulations, fragmented venue connectivity, and rising operational costs make the path to straight-through processing (STP) increasingly complex for institutional FX participants. Many firms still use a patchwork of in-house tools, third-party vendor systems, and legacy solutions that are built to solve immediate needs but are not designed to scale.

FX STP Link simplifies post-trade processing by centralizing data from multiple FX venues into one streamlined, automated process. It reduces manual intervention and operational risk, and transforms your post-trade process from a costly liability into a powerful asset.

## Key benefits

### Faster, automated workflows

Achieve true STP by automating data capture, enabling faster front-to-back trade processing.

### Reduced operational risk

Mitigate errors and inconsistencies by normalizing diverse message formats into a single standardized data model.

### Drive transparency

End-to-end monitoring and alerts, enabling you to proactively identify and resolve issues.

### Lower total cost of ownership

Eliminate the need for expensive in-house technical debt and manual maintenance with the hosted Bloomberg Integration Platform as a Service (iPaaS).

### Future-proof scalability

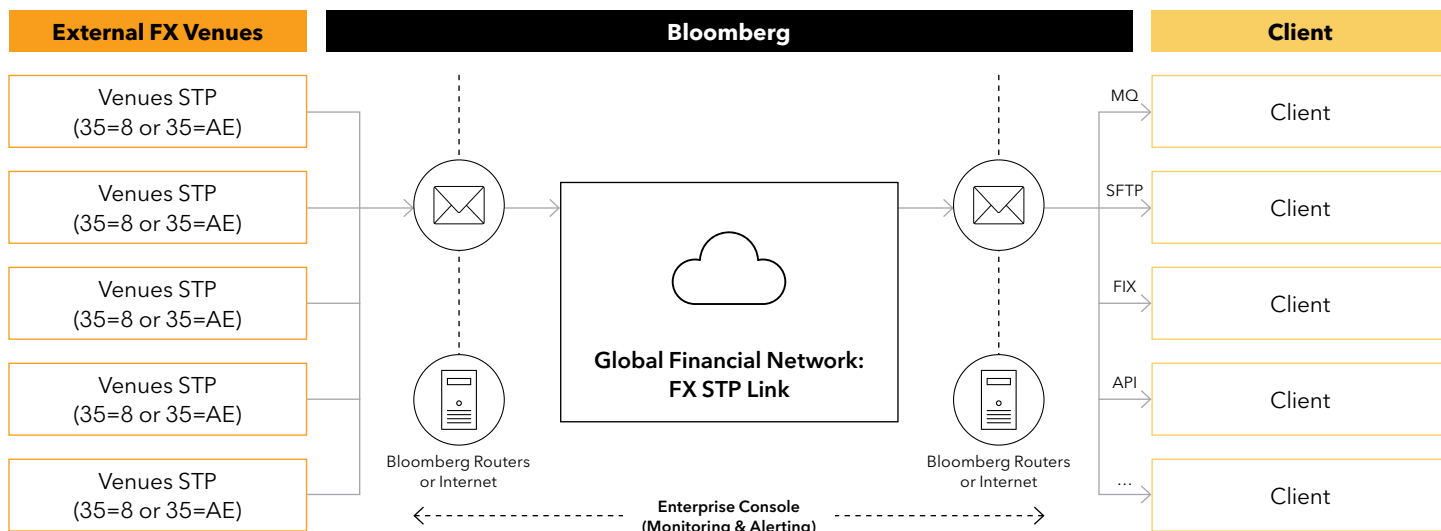

Build a foundation for growth with a solution that can easily scale to support new venues, FX instrument types and cross-asset class integrations.

### Driven by Bloomberg innovation

Partner with a trusted industry leader that has established technical and commercial relationships across the FX community.

## FX STP Link data flow

### Key features

#### Broad venue coverage: Your single point of venue connectivity

Eliminate the complexity of building and maintaining individual connections to every trading platform. With the FX STP Link, you can simplify your post-trade activities with a single interface into your systems that is pre-integrated with many single-bank and multi-bank FX trading venues.

#### Venue-specific normalization: A unified data stream

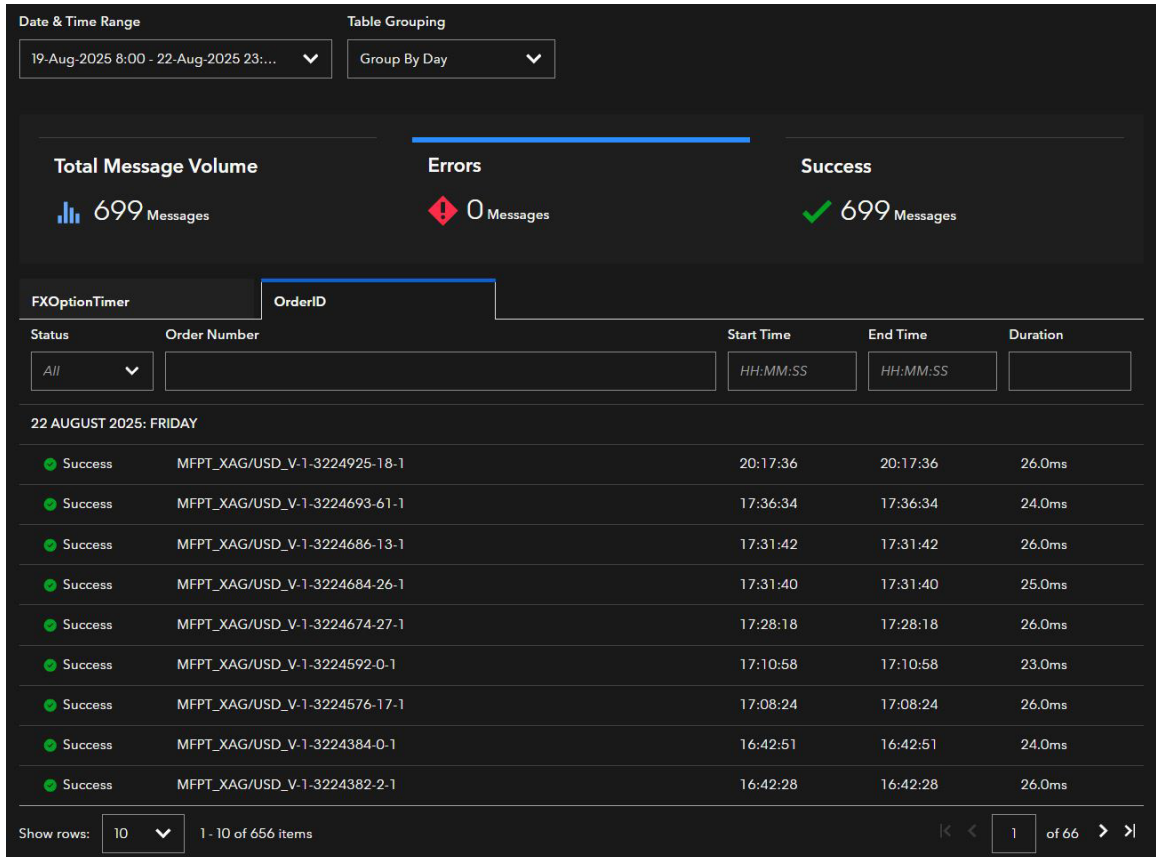

Unique data formats across venues make translation and normalization a constant challenge. The FX STP Link solves this problem with a single connection, normalizing incoming trade data into one standardized model. This unified data stream is easy for your downstream systems to consume, regardless of asset type or trading platform, to help support STP.

#### Data transformation layers tailored to your business needs

Post-trade processing never follows a "one-size-fits-all" approach. The FX STP Link offers a powerful, flexible data transformation layer that eliminates the need for you to build and manage your own Extract, Transform, Load (ETL) applications.

Bloomberg-managed configurability delivers a clean data stream to your proprietary or third-party systems in your preferred format, saving time, reducing costs and providing flexibility to meet your unique business needs.

## Gain transparency into your workflow with Enterprise Console

Complementing the FX STP Link’s automation capabilities, the Enterprise Console is a dedicated monitoring and alerting tool that provides an end-to-end view of your integration workflow. It enables you to:

- Track the status of connectivity and message validation
- Set up proactive alerts for errors or delays to prevent disruptions
- Gain comprehensive transparency across systems for improved operational oversight
- Quickly identify and resolve issues, to help support smooth and uninterrupted workflows

By delivering actionable insights and visibility, the Enterprise Console helps maximize operational efficiency and maintain the integrity of your workflows.
