# Bloomberg

Swift Service Bureau

Empowering financial communication.

Secure, reliable, managed connectivity

Bloomberg's Swift Service Bureau is a full-service, certified solution that offers secure and reliable connectivity to Swift services for banking, capital markets, and corporate workflows.

At Bloomberg, our Swift solution spans three dimensions:

- **Buy-side efficiency:** Clients seek automated post-trade workflows, especially with the introduction of T+1 settlement. Swift enables secure, reliable automation of back-office processes.

- **Sell-side transformation:** Banks are constantly seeking more cost-effective hosting strategies and technology stacks. Our zero-footprint Swift Service Bureau streamlines the transition of infrastructure to the cloud, complemented by Bloomberg's Enterprise Integration Platform, providing seamless Swift integration.

- **Corporate advancement:** Corporations dealing with multiple banking relationships find Swift indispensable. It offers transparency, security, and frictionless operations, making it the preferred choice for scaling businesses.

High-level Bloomberg Swift Service Bureau workflows

Certified and trusted

- Certified with Swift's Shared Infrastructure Programme (SIP), ensuring high security and resilience for Service Bureau operations.
- Extend your reach with Swift's financial messaging services.

Fully hosted solution

- Reduce costly infrastructure and upgrades. Let Bloomberg handle the heavy lifting with a fully hosted setup.
- Be ready for the T+1 shortened settlement cycle in Europe by communicating trade details faster and getting live settlement statuses from banks.
- Full support for CBPR+ messages in MX format for the global transition to ISO 20022.
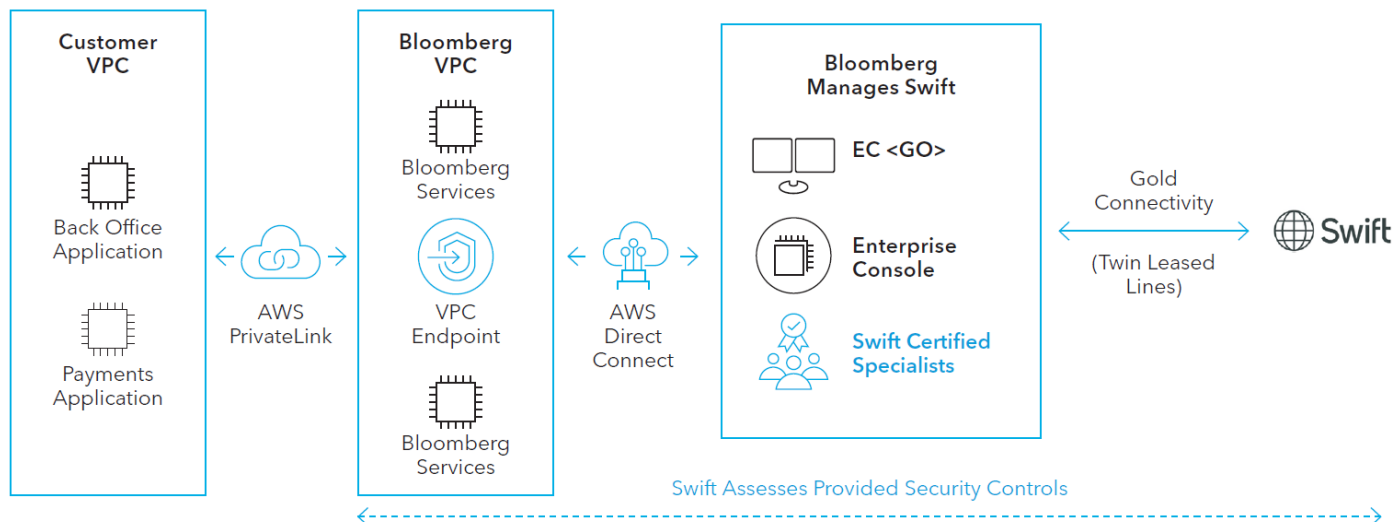

Transparency and support

- Monitor message status via Bloomberg's secure Enterprise Console.
- Manage all relationship management applications (RMAs), set up multi-stage approvals and receive alerts for transaction issues.
- Access Bloomberg's top-tier 24/7 global support.

Integration capabilities

- Standard support for flexible, file-based workflows.
- Direct integration options (IBM MQ, Web APIs).
- Complex workflows supported through Bloomberg's Enterprise Integration Platform.

AWS connectivity

- Certified solution on Amazon AWS, using PrivateLink for secure connections.
- Achieve zero-footprint Swift workflows via AWS and Bloomberg.
